

Dishwashing brush with replaceable head

Ready for use with one click

Whether purist or dynamic, each of the six different handle designs lies comfortably and ergonomically in the hand.

Thanks to an ingenious and stable click mechanism, the handles can be fitted with different brush heads especially for the respective application: soft bristles for glass and delicate pan coatings, hard bristles for stubborn dirt or brass bristles for the grill bars.

This makes these brush handles very flexible to use and furthermore also extremely durable, as only the part of the

brush head is replaced, which also needs to be replaced after a certain amount of time and wear.

Not only the replaceable brush heads, but also the use of high-quality materials make this product a sustainable alternative to conventional dishwashing brushes: All brush heads are injection moulded from recycled plastic only. Recycled plastic can also be used for the material-saving 1-component handles.

Plastic is used sensibly and sparingly here.

replaceable brush head thanks to ingenious click mechanism

available in various material-saving handle designs

purist-ecological variant made of recycled plastic

replacement brush heads for each application with different trim and cut

available in various 2-component handle designs

comfortable grip with non-slip TPE grip surfaces
