

Flex toilet brush

Resilient and flexible

Thanks to a specially developed brush neck, the Flex toilet brush manages to keep the toilet clean effortlessly, even in hard-to-reach places.

The patented, wave-shaped Flex part can be bent in such a way that the brush trim lies over a large area on the surfaces to be cleaned. With an optimally balanced degree of hardness, the brush handle is very flexible on the one hand, but on the other hand it also offers sufficient stability for good pressure build-up during the cleaning process.

The interplay of design and high-quality material ensures that the flexible brush neck retains its original shape even after thousands of uses.

The handle lies comfortably in the hand and impresses with its simple, beautifully shaped form.

The Flex toilet brush is available with a head diameter of 65 mm or 77 mm. It is compatible with every Ebnat toilet brush holder and fits – depending on the opening diameter – also into many other holding devices, such as e.g. ceramic wall holders.

Whether in the conventional 1-component version, made entirely of recycled plastic, or manufactured from two components: «Flex» is an indispensable helper in every toilet.

thanks to the Flex area, the brush head also cleans hard-to-reach surfaces

the ergonomic handle lies securely and pleasantly in the hand

extremely bendable thanks to patented Flex area

also available with practical rim cleaner

available in two different sizes, with or without rim cleaner and as a variant with replaceable head

compatible with Ebnat toilet set holder and many other holding devices
