

Tradition

A piece of Switzerland meets innovation

Many Swiss values packed into one assortment: quality, innovation and tradition.

All broom bodies in this range are made of FSC® certified Swiss beech wood from the region of Toggenburg. The trim material of the floor and hand wiper consists of at least 50% horsehair. The scrubber is equipped with at least 50% natural fibre trim.

Both the jointed handle holder on the floor wiper and the rotating handle holder on the scrubber are patented inventions from Ebnat. On the one hand, the jointed handle holder allows conventional cleaning with a vertically fixed handle.

On the other hand the handle holder can be released with a simple twisting motion and the handle can then be tilted. This makes it easy to clean otherwise hard-to-reach places under and between furniture.

The scrubber can also be brought into an alternative position by turning it 90 degrees. This makes it possible to reach into narrow gaps and is also ideal for cleaning grooves and joints.

The sweeping set also leaves nothing to be desired. The hand wiper can be fixed in the dustpan by a click mechanism. The soft rubber lip of our sturdy dustpan adapts perfectly to any surface and leaves no dirt behind.
